This semi-annual report was originally prepared in Norwegian. This is an unofficial translated version and no liability is assumed for any errors or ambiguities that may have arisen in connection with the translation. The original version of this semi-annual report is available in Norwegian and can be ordered from ODIN Fund Management.

Statements in this semi-annual report reflect ODIN's views on the market at the time when the semi-annual report was published.

This report shows past performance. Past performance is no guarantee for future performance. Future performance will depend on things such as movements in the market, the manager's skills, the fund's risk level and the costs of managing the funds. The value of the fund may decrease as a result of a fall in share prices. All return figures are stated in NOK, unless otherwise stated.

The first half of 2015

The first half of 2015 was a good period for our customers and therefore it was a good period for ODIN as well. The unit holders in ODIN's mutual fundshad an average return of 11.5 per cent (NOK) as per 30 June. For the money market and bond funds, the return for the period was 0.9 per cent.

The returns for the first half of the year are good. However, that period is short, and we know that we are working in markets that fluctuate between growth and decline. Therefore, we know that we may not have experienced the last drop in the markets. That is what it's like to be an investor.

Satisfied customers are the very foundation of our existence. In ODIN, however, we are never completely satisfied. We must always work to become better!

In ODIN, fluctuating markets have taught us that it pays off to have a long-term strategy. We want our customers to think the same. New subscriptions in ODIN's funds have never been higher than what we experienced in the first half, and that pleases us. Thank you for your trust. However, what we are most appreciative of is the trend in the many monthly savings agreements that our customers have established. These savings agreements now have a significantly longer duration than they did a few years ago. The average duration has exceeded seven years. We hope that is a sign that more and more customers are becoming long-term in their savings.

Why are long-term savings so important to us? Investments in mutual funds are associated with a risk of not achieving a satisfactory return on assets, but all experience indicates that this risk decreases substantially when the savings period is

sufficiently long. The point in time when the saving commences and concludes affects the return. With a one-year savings horizon, the outcome will be dependent on the date of purchase and sale. In a period of ten years, the date of purchase and sale becomes significantly less crucial. With that kind of time horizon, you as a unit holder will take part in the creation of wealth that occurs in the companies in which ODIN invests. In ODIN, long term creation of wealth is what we are looking for when we search for good investment opportunities.

We hope you will join us in our long-term journey.

With best wishes for a continued excellent savings year.

Rune Selmar
CEO, ODIN Forvaltning AS

Risk measurement 30/06/2015

The indicator is based on fluctuations in the mutual fund's historical year-end prices. The fluctuations are measured by the weekly returns that have been recorded for more than the past five years. Large historical fluctuations mean it is more likely that the investment may fluctuate a lot in the future too. The probability of the investment's value rising and falling a lot in the future is thus greater if there have been large historical fluctuations. Large fluctuations may also mean there is a greater chance of the price falling to below that paid for the investment and of the return being negative due to share price losses.

Past performance is no guarantee of future performance. Historical fluctuations in price will therefore not necessarily provide a correct picture of the fund's future risk profile. The mutual fund's score is thus not fixed and will normally change over time.

Active share is an indicator that expresses how much of the fund's portfolio that deviates from its benchmark. An active share of 60 percent means that the fund at the time of the measurement deviates 60 percent from the benchmark composition.

This fund and ODIN Forvaltning AS are registered in Norway and regulated by Finanstilsynet (the Financial Supervisory Authority of Norway).

Please note that the historical return is not a guarantee of future returns. The future return will among other things depend on market developments, the manager's skills, the fund's risk level and the costs of buying units and managing the fund. The return may be negative as a result of share losses.

ODIN Forvaltning employees may trade for their own account in several types of financial instruments. This means that ODIN Forvaltning employees may own securities in companies that are referred to in this report as well as units in ODIN's mutual funds. The employees' own-account trading is to take place in accordance with ODIN Forvaltning AS's internal guidelines on employee own-account trading, which have been prepared pursuant to the Norwegian Securities Trading Act and the Norwegian Fund and Asset Management Association's industry standard.

ODIN Forvaltning AS may only be held responsible for information in this document that is misleading, inaccurate or inconsistent in relation to relevant information in the prospectus.

Risk measurement 30/06/2015

1	2	3	4	5	6	7
Lower risk						Higher risk
						
Lower possible return				Higher possible return		
				Portfolio	Index	
				Volatility (3 years)	11,77	
				Active Share	0,50	

The scale indicates the link between the risk involved in and possible return on an investment in the mutual fund. A low score indicates a low level of risk while a high score indicates a high level of risk. Note that achieving the lowest score does not mean the investment is risk-free.

The indicator is based on fluctuations in the mutual fund's historical year-end prices. The fluctuations are measured by the weekly returns that have been recorded for more than the past five years. Large historical fluctuations mean it is more likely that the investment may fluctuate a lot in the future too. The probability of the investment's value rising and falling a lot in the future is thus greater if there have been large historical fluctuations. Large fluctuations may also mean there is a greater chance of the price falling to below that paid for the investment and of the return being negative due to share price losses.

Past performance is no guarantee of future performance. Historical fluctuations in price will therefore not necessarily provide a correct picture of the fund's future risk profile. The mutual fund's score is thus not fixed and will normally change over time.

Active share is an indicator that expresses how much of the fund's portfolio that deviates from its benchmark. An active share of 60 percent means that the fund at the time of the measurement deviates 60 percent from the benchmark composition.

This fund and ODIN Forvaltning AS are registered in Norway and regulated by Finanstilsynet (the Financial Supervisory Authority of Norway).

Please note that the historical return is not a guarantee of future returns. The future return will among other things depend on market developments, the manager's skills, the fund's risk level and the costs of buying units and managing the fund. The return may be negative as a result of share losses.

ODIN Forvaltning employees may trade for their own account in several types of financial instruments. This means that ODIN Forvaltning employees may own securities in companies that are referred to in this report as well as units in ODIN's mutual funds. The employees' own-account trading is to take place in accordance with ODIN Forvaltning AS's internal guidelines on employee own-account trading, which have been prepared pursuant to the Norwegian Securities Trading Act and the Norwegian Fund and Asset Management Association's industry standard.

1	2	3	4	5	6	7			
Lower risk				Higher risk					
									
Lower possible return			Higher possible return						
Portfolio			Index						
Volatility (3 years)			7,52		8,53				
Active Share			0,48						

The scale indicates the link between the risk involved in and possible return on an investment in the mutual fund. A low score indicates a low level of risk while a high score indicates a high level of risk. Note that achieving the lowest score does not mean the investment is risk-free.

The indicator is based on fluctuations in the mutual fund's historical year-end prices. The fluctuations are measured by the weekly returns that have been recorded for more than the past five years. Large historical fluctuations mean it is more likely that the investment may fluctuate a lot in the future too. The probability of the investment's value rising and falling a lot in the future is thus greater if there have been large historical fluctuations. Large fluctuations may also mean there is a greater chance of the price falling to below that paid for the investment and of the return being negative due to share price losses.

Past performance is no guarantee of future performance. Historical fluctuations in price will therefore not necessarily provide a correct picture of the fund's future risk profile. The mutual fund's score is thus not fixed and will normally change over time.

Active share is an indicator that expresses how much of the fund's portfolio that deviates from its benchmark. An active share of 60 percent means that the fund at the time of the measurement deviates 60 percent from the benchmark composition.

This fund and ODIN Forvaltning AS are registered in Norway and regulated by Finanstilsynet (the Financial Supervisory Authority of Norway).

Please note that the historical return is not a guarantee of future returns. The future return will among other things depend on market developments, the manager's skills, the fund's risk level and the costs of buying units and managing the fund. The return may be negative as a result of share losses.

ODIN Forvaltning employees may trade for their own account in several types of financial instruments. This means that ODIN Forvaltning employees may own securities in companies that are referred to in this report as well as units in ODIN's mutual funds. The employees' own-account trading is to take place in accordance with ODIN Forvaltning AS's internal guidelines on employee own-account trading, which have been prepared pursuant to the Norwegian Securities Trading Act and the Norwegian Fund and Asset Management Association's industry standard.

ODIN Forvaltning AS may only be held responsible for information in this document that is misleading, inaccurate or inconsistent in relation to relevant information in the prospectus.

Risk measurement 30/06/2015

The indicator is based on fluctuations in the mutual fund's historical year-end prices. The fluctuations are measured by the weekly returns that have been recorded for more than the past five years. Large historical fluctuations mean it is more likely that the investment may fluctuate a lot in the future too. The probability of the investment's value rising and falling a lot in the future is thus greater if there have been large historical fluctuations. Large fluctuations may also mean there is a greater chance of the price falling to below that paid for the investment and of the return being negative due to share price losses.

Past performance is no guarantee of future performance. Historical fluctuations in price will therefore not necessarily provide a correct picture of the fund's future risk profile. The mutual fund's score is thus not fixed and will normally change over time.

Active share is an indicator that expresses how much of the fund's portfolio that deviates from its benchmark. An active share of 60 percent means that the fund at the time of the measurement deviates 60 percent from the benchmark composition.

This fund and ODIN Forvaltning AS are registered in Norway and regulated by Finanstilsynet (the Financial Supervisory Authority of Norway).

Please note that the historical return is not a guarantee of future returns. The future return will among other things depend on market developments, the manager's skills, the fund's risk level and the costs of buying units and managing the fund. The return may be negative as a result of share losses.

ODIN Forvaltning employees may trade for their own account in several types of financial instruments. This means that ODIN Forvaltning employees may own securities in companies that are referred to in this report as well as units in ODIN's mutual funds. The employees' own-account trading is to take place in accordance with ODIN Forvaltning AS's internal guidelines on employee own-account trading, which have been prepared pursuant to the Norwegian Securities Trading Act and the Norwegian Fund and Asset Management Association's industry standard.

ODIN Forvaltning AS may only be held responsible for information in this document that is misleading, inaccurate or inconsistent in relation to relevant information in the prospectus.

Risk measurement 30/06/2015

1	2	3	4	5	6	7
Lower risk						Higher risk
						
Lower possible return						Higher possible return
				Portfolio	Index	
				Volatility (3 years)	9,39	
				Active Share	0,99	

The scale indicates the link between the risk involved in and possible return on an investment in the mutual fund. A low score indicates a low level of risk while a high score indicates a high level of risk. Note that achieving the lowest score does not mean the investment is risk-free.

The indicator is based on fluctuations in the mutual fund's historical year-end prices. The fluctuations are measured by the weekly returns that have been recorded for more than the past five years. Large historical fluctuations mean it is more likely that the investment may fluctuate a lot in the future too. The probability of the investment's value rising and falling a lot in the future is thus greater if there have been large historical fluctuations. Large fluctuations may also mean there is a greater chance of the price falling to below that paid for the investment and of the return being negative due to share price losses.

Past performance is no guarantee of future performance. Historical fluctuations in price will therefore not necessarily provide a correct picture of the fund's future risk profile. The mutual fund's score is thus not fixed and will normally change over time.

Active share is an indicator that expresses how much of the fund's portfolio that deviates from its benchmark. An active share of 60 percent means that the fund at the time of the measurement deviates 60 percent from the benchmark composition.

This fund and ODIN Forvaltning AS are registered in Norway and regulated by Finanstilsynet (the Financial Supervisory Authority of Norway).

Please note that the historical return is not a guarantee of future returns. The future return will among other things depend on market developments, the manager's skills, the fund's risk level and the costs of buying units and managing the fund. The return may be negative as a result of share losses.

ODIN Forvaltning employees may trade for their own account in several types of financial instruments. This means that ODIN Forvaltning employees may own securities in companies that are referred to in this report as well as units in ODIN's mutual funds. The employees' own-account trading is to take place in accordance with ODIN Forvaltning AS's internal guidelines on employee own-account trading, which have been prepared pursuant to the Norwegian Securities Trading Act and the Norwegian Fund and Asset Management Association's industry standard.

ODIN Forvaltning AS may only be held responsible for information in this document that is misleading, inaccurate or inconsistent in relation to relevant information in the prospectus.

Risk measurement 30/06/2015

The scale indicates the link between the risk involved in and possible return on an investment in the mutual fund. A low score indicates a low level of risk while a high score indicates a high level of risk. Note that achieving the lowest score does not mean the investment is risk-free.

The indicator is based on fluctuations in the mutual fund's historical year-end prices. The fluctuations are measured by the weekly returns that have been recorded for more than the past five years. Large historical fluctuations mean it is more likely that the investment may fluctuate a lot in the future too. The probability of the investment's value rising and falling a lot in the future is thus greater if there have been large historical fluctuations. Large fluctuations may also mean there is a greater chance of the price falling to below that paid for the investment and of the return being negative due to share price losses.

Past performance is no guarantee of future performance. Historical fluctuations in price will therefore not necessarily provide a correct picture of the fund's future risk profile. The mutual fund's score is thus not fixed and will normally change over time.

This fund and ODIN Forvaltning AS are registered in Norway and regulated by Finanstilsynet (the Financial Supervisory Authority of Norway).

Please note that the historical return is not a guarantee of future returns. The future return will among other things depend on market developments, the manager's skills, the fund's risk level and the costs of buying units and managing the fund. The return may be negative as a result of share losses.

ODIN Forvaltning employees may trade for their own account in several types of financial instruments. This means that ODIN Forvaltning employees may own securities in companies that are referred to in this report as well as units in ODIN's mutual funds. The employees' own-account trading is to take place in accordance with ODIN Forvaltning AS's internal guidelines on employee own-account trading, which have been prepared pursuant to the Norwegian Securities Trading Act and the Norwegian Fund and Asset Management Association's industry standard.

ODIN Forvaltning AS may only be held responsible for information in this document that is misleading, inaccurate or inconsistent in relation to relevant information in the prospectus.

The scale indicates the link between the risk involved in and possible return on an investment in the mutual fund. A low score indicates a low level of risk while a high score indicates a high level of risk. Note that achieving the lowest score does not mean the investment is risk-free.

The indicator is based on fluctuations in the mutual fund's historical year-end prices. The fluctuations are measured by the weekly returns that have been recorded for more than the past five years. Large historical fluctuations mean it is more likely that the investment may fluctuate a lot in the future too. The probability of the investment's value rising and falling a lot in the future is thus greater if there have been large historical fluctuations. Large fluctuations may also mean there is a greater chance of the price falling to below that paid for the investment and of the return being negative due to share price losses.

Past performance is no guarantee of future performance. Historical fluctuations in price will therefore not necessarily provide a correct picture of the fund's future risk profile. The mutual fund's score is thus not fixed and will normally change over time.

Active share is an indicator that expresses how much of the fund's portfolio that deviates from its benchmark. An active share of 60 percent means that the fund at the time of the measurement deviates 60 percent from the benchmark composition.

This fund and ODIN Forvaltning AS are registered in Norway and regulated by Finanstilsynet (the Financial Supervisory Authority of Norway).

Please note that the historical return is not a guarantee of future returns. The future return will among other things depend on market developments, the manager's skills, the fund's risk level and the costs of buying units and managing the fund. The return may be negative as a result of share losses.

ODIN Forvaltning employees may trade for their own account in several types of financial instruments. This means that ODIN Forvaltning employees may own securities in companies that are referred to in this report as well as units in ODIN's mutual funds. The employees' own-account trading is to take place in accordance with ODIN Forvaltning AS's internal guidelines on employee own-account trading, which have been prepared pursuant to the Norwegian Securities Trading Act and the Norwegian Fund and Asset Management Association's industry standard.

ODIN Forvaltning AS may only be held responsible for information in this document that is misleading, inaccurate or inconsistent in relation to relevant information in the prospectus.
